IoT Engineering Consultant (17051)

Our Bellevue, WA client is seeking a full time IoT Engineering Consultant to support their fast-paced team. This cutting edge, technology company is a market leading provider of software solutions for the Internet of Things (IoT) market, focused on industrial customers. They offer a unique blend of a startup—fun, dynamic, and high-growth potential—and an established company—great benefits without startup risk.

Responsibilities:
- You will work directly with the Customer to design and implement solutions based on business and technical requirements.
- Coordinate with Solution Architects the goal of the business use cases.
- Work With customer's technical resources to understand customer network environment, Device and Server protocols they can support for interfacing with our Product (Message Queue Types, MQTT, LWM2M, SQS, AMQP, etc).
- Coordinate with Data Scientists the feasibility of the customer's current data to support the desired use cases.
- Working closely with project managers, you will provide technical leadership and guidance throughout the life of an implementation project.
- Ensure DataV proper customer installation and able to view customer data input into DataV product.
- Assist customer in authoring rules relevant to their primary business use cases.
- Debug, troubleshoot and resolve complex technical issues reported by customers
- Partner with Sales, Product and Engineering to understand customer challenges and develop and implement creative solutions.
- Proactively work with customers to understand their needs and give them a path to achieving their goals.
- Ability to support extended travel engagements, onsite visits with customers (travel up to 50%)

Qualifications:
- Ability to Travel.
- BS Computer Science or equivalent work experience.
- Experience with IOT and streaming protocols such as (MQTT, LWM2M, SQS, AMQP, Kafka).
- Experience with cloud deployment (i.e. – AWS, MSFT Azure, etc.).
- Experience implementing enterprise level software - especially SaaS.
- Strong deployment and administration skills with one of the major network operating systems (i.e. - Windows, Linux).
- External Customer facing experience as a technical representative.
- Demonstrated time management, written and verbal skills, and are able to communicate complex technical issues effectively

- Passionate about keeping up to date with fast moving technology.
- Nice to Have: Java, Drools, DRL, XML
