

Software Test Engineer (18013)

Description:

Writes test cases, and may run and / or write test automation scripts. Performs detailed analysis of test results and adjusts test cases accordingly. Can provide some bug prevention or proactive testing through product specification reviews. Works with developers and/or program managers to troubleshoot failures or triage to the appropriate level.

Skills:

- 3-5 years of debugging experience. Relevant related experience will be considered.
- Knowledge of, and experience in, black box software testing principles.
- Demonstrated ability to define and use common terms and concepts for at least one operating system and environment required.
- Beginner to intermediate level knowledge of one or more scripting languages (Java Script, VBScript, Perl Script or Windows batch files) may be required.
- Working knowledge of networking protocols (TCP/IP), hardware, debugging, and operating systems preferred.
- Experience on testing on Windows mobile devices is preferable.
- Knowledge of Windows interface guidelines may be required.
- Should be able to work independently.
- Bachelor's degree in Computer Science or Engineering, and/or experience with testing preferred.

TOP 3 required skills candidates must have.

- 1.) Experience with debugging (KD experiences is a big plus).
- 2.) Comfortable using spreadsheets (Excel).
- 3.) Detail-oriented.

Please note: we are unable to consider third party candidates for this position.

Axelerate offers Equal Employment Opportunity to all applicants regardless of race, religion, color, sex (including pregnancy, gender identity, and sexual orientation), parental status, national origin, age, disability, family medical history or genetic information, political affiliation, military service, or other non-merit based factors. These protections extend to all management practices and decisions, including recruitment and hiring practices, appraisal systems, promotions, and training and career development programs.
